

Payson Water Company – East Verde Estates

ALTERNATE DRINKING WATER

Payson Water Company is in the process of constructing a nitrate filtration system to remove nitrates from the water. Meanwhile, a water filling station has been installed for anyone who would like to use it beginning **Friday, April 5, 2024**. It is located in front of well site 116 Nellie in East Verde Estates, at the corner of Nellie Drive and W. Eleanor, in the brown metal building in front of the fence and next to the power pole. The filling station should accommodate most common size water containers.

Filling Station Instructions

- The door to the filling station has a magnet. Open the door slowly until it touches the building wall. NOTE: if the door is locked on arrival, it means the filling station water container is being replaced. The door will be unlocked once the station is ready again for use.
- The LED light inside the building works on a motion sensor. If it goes out, it will turn on again when it senses motion.
- Before using the station, wipe off the faucet with a Clorox Disinfecting Wipe located on the sink.
- For 1-gallon containers:
 1. Place your container on the wire rack under the faucet.
 2. Turn on the switch at the faucet.
 3. After filling your container, turn off the switch.
- For 5-gallon containers:
 1. Remove and hang the wire rack on the front of the sink.
 2. Place your container in the sink under the faucet.
 3. Turn on the switch at the faucet.
 4. After filling your container, turn off the switch and replace the rack.
- When finished, check to make sure the water is turned off. Then close and latch the door to the filling station.
